

Discovering the interface {#discovering-interface}

About the new interface {#about-interface}

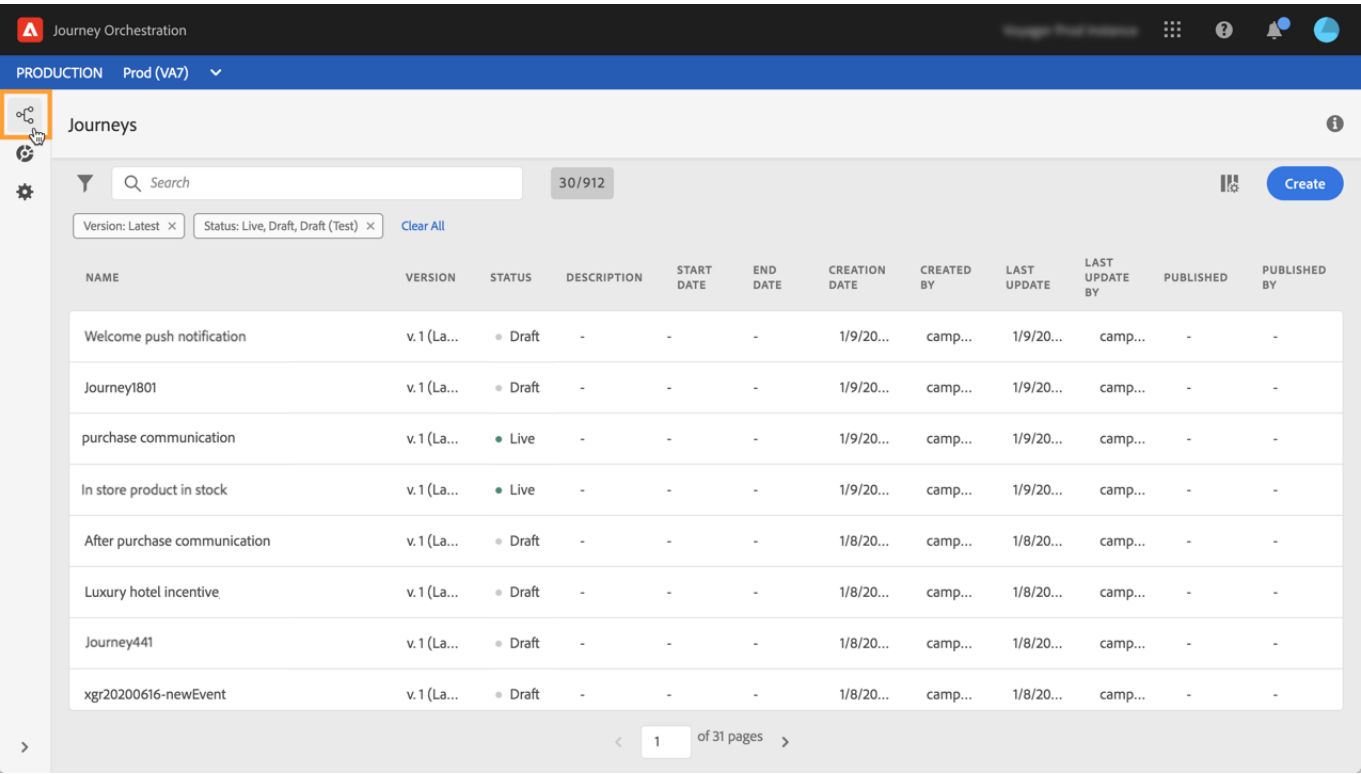

Navigation within Journey Orchestration menus has been enhanced, in order to provide a unified interface with Adobe Experience Platform. Changes include:

- Menus moved from the top to the left-hand side of the interface,
- Grouping of admin functionalities into a single dashboard.

Global concepts on how to use and navigate in the interface (searching and filtering, browsing through Data Platform fields, shortcuts) are presented in [this section](#).

Accessing Journey Orchestration functionalities {#accessing-journey-orchestration-functionalities}

When you access Journey Orchestration, the **[!UICONTROL Journeys]** menu is displayed, allowing you to access existing journeys or create new ones. See [Using the journey designer](#).

The **[!UICONTROL Segments]** menu allows you to access and create Experience Platform segments. See [About Platform segments](#).
